BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

November 1969

1080

No. 11

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

USDA Publications

State Agricultural Experiment Station Publications

State Agricultural Extension Service Publications

Agricultural Economics and Rural Sociology

Agricultural Products

Animal Industry

Engineering

Entomology

Food and Human Nutrition

Forestry

Plant Science

Soils and Fertilizers

Miscellaneous

The classified section is followed by the listing of:

New Periodicals and Serials

Translations

Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765-List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Citations listed with the annotation "CFSTI" followed by price are also available for purchase from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Maryland, 20705. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (March 31, 1964)

CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Maryland, 20705.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

EFFECT OF TIME AND TEMPERATURE OF STORAGE ON VIABILITY OF BOTRYTIS CONVOLUTA CONIDIA AND SCLEROTIA. Plant Dis. Rep. 53(2):141-144. Feb. 1969. 1.9 P69P
Survival of *Botrytis convoluta* conidia and sclerotia was favored by low temperatures. Freezing conidia at -70°C lowered their germinability only slightly after 257 days. Germinability was lost rapidly at 30°C. *B. convoluta* sclerotia held in test tubes at temperatures of 0-70 to 25° remained at least 70 percent viable after 366 days. Sclerotia held at 30° percent lost 65 percent germinability after 366 days. Sclerotia held in moist non-sterile soil lost viability rapidly at temperatures above 15°, presumably due to activities of antagonistic soil fungi.

EFFECTIVENESS OF SEVERAL SYSTEMIC AND NONSYSTEMIC FUNGICIDES IN THE PREVENTION OF BOTRYTIS [CINEREA] BLIGHT OF GERANIUM [PELARGONIUM] CUTTINGS AND STOCK PLANTS. Plant Dis. Rep. 53(6):412-415. Ref. June 1969. 1.9 P69P
Three systemic fungicides and two non-systemic fungicides were used as dips, drenches, and sprays on geranium cuttings and cutting stubs on geranium stock plants to compare their effectiveness in the prevention of *Botrytis blight*. Treatments with one of the systemic fungicides, benomyl, plus Surfactant F, were the most effective. Complete prevention of infection of geranium cuttings by *Botrytis cinerea* was not obtained with benomyl treatments. Spraying cutting stubs on geranium stock "plants" with benomyl did result in complete prevention of infection *B. cinerea*. Dead geranium leaves treated with benomyl and the nonsystemic fungicide 2,6-dichloro-4-nitroaniline appeared to have residual suppressant activity for *B. cinerea* growth and sporulation.

- 71704 Sitterly, W. R.
EFFECT OF CROP ROTATION ON CUCUMBER GUMMY STEM BLIGHT. Plant Dis. Rep. 53(6):417-419. June 1969. 1.9 P69P
Mycosphaerella melonis.
Merely breaking the sequence of continuous cucumber cropping appeared to be effective in reducing the severity of cucumber gummy stem blight, and the longer the interval between cucumber crops the lower the percentage of foliage infection. Neither the type of crop used in the rotation schedules nor the sequence appeared to be decisive. An 18-month rotation schedule was deemed most economical. The pathogen apparently cannot be completely eradicated from an area by any economical rotation system. Summer squash (cv. Yellow Crookneck) was not visually infected by gummy stem blight.

- 71706 Lambert, F.
PATHOGENICITY OF LONGIDORUS AFRICANUS ON SELECTED FIELD CROPS. Plant Dis. Rep. 53(6):421-424. June 1969. 1.9 P69P
Roots of glasshouse-grown lettuce (*Lactuca sativa* "Climax") and sorghum (*Sorghum bicolor* "NK 133" [S. vulgare]) infected 10 weeks by *Longidorus africanus* Merny were reduced in size and weight. Root tips were swollen and distorted with necrotic areas.
Sugarbeet (*Beta saccharifera* "U. S. 75") seedlings exposed 3 weeks were severely stunted and had fewer roots with swollen, necrotic tips.
Field-grown lettuce attacked by *L. africanus* develops a syndrome similar to those mentioned above.
The nematode reproduced well on potted lettuce sorghum, but poorly on the highly sensitive sugarbeet seedling.
- 71707 Biehn, W. L.
EVALUATION OF SEED AND SOIL TREATMENTS FOR CONTROL OF RHIZOCTONIA SCURF AND VERTICILLIUM WILT [ALBO-ATRUM] OF POTATO. Plant Dis. Rep. 53(6):425-427. June 1969. 1.9 P69P
Four fungicides were evaluated as seed treatments for the control of black scurf on harvested tubers. Two of the four fungicides, benomyl and a 1,4-oxathin derivative (DCMO), were also evaluated as seed and soil treatments for control of Verticillium wilt and black scurf. All treatments controlled black scurf when conditions were such as to result in a low level of disease. Benomyl seed treatment and seed-soil treatments of benomyl or DCMO resulted in the best control of black scurf. Where black scurf was more severe, probably due to a high level of soilborne *Rhizoctonia solani*, none of the seed treatments controlled the disease. A seed and soil treatment with benomyl slightly reduced Verticillium wilt. Another fungicide seed treatment and a seed and soil treatment with DCMO failed to reduce Verticillium wilt.

STEM PITTING IN COMMERCIAL CHERRY AND PLUM ORCHARDS IN PENNSYLVANIA. Plant Dis. Rep. 53(6):434-438. Ref. June 1969. 1.9 P69P
Wood pitting symptoms have recently been associated with a serious disorder of peach, *Prunus persica*. Similar symptoms have also been observed on seedlings of apricot, *P. armeniaca*, and on cultivars of nectarine, *P. persica* var. *nectarina*. The present report presents evidence for the association of similar pitting symptoms with a decline syndrome in other *Prunus* spp. and commercial cultivars, including sour cherry, *P. cerasus* "Montmorency"; sweet cherry, *P. avium* "Windsor"; flowering cherry, *P. serrulata* "Shiro-nugen"; and plum, *P. domestica* "Fellenberg," "Stanley," and "Bradshaw"; *P. salicina* "Satsuma," "Abundance" and "Santa Rosa," and the hybrid plum cultivars "Wickson" and "Shiro."

A POSSIBILITY FOR SELECTION OF RICE VARIETIES RESISTANT TO HOJA BLANCA. Plant Dis. Rep. 53(6):440-443. Ref. June 1969. 1.9 P69P
Viruliferous *Sogatodes orizicola* (Muir) were confined for 6 days in microcages mounted on the second leaf of rice plants in the 2-3 leaf developmental stage. Results were obtained 5 weeks after sowing. Sixteen rice varieties were checked and grouped according to their susceptibility. Seven of the 16 varieties had been screened earlier by other authors in field experiments and gave the same results in our experiments. Sixteen selections of crosses between Var. 501 and Var. 10.032 were found to be highly susceptible.
Hoja blanca was transmitted more effectively by females than by males of the same highly active consecutive generations at 1, 3, and 4 days' inoculation feedings, but equal after feedings for 5 days or longer.

ORIENTAL SHEATH AND LEAF SPOT OF RICE. Plant Dis. Rep. 53(6):444-445. June 1969. 1.9 P69P
The occurrence of leaf and sheath spot of rice is fairly widespread in Varanasi, India. Diagnostic disease symptoms on the host are described and the pathogen identified as *Corticium sasakii* (Shirai) Matsumoto. Development of the basial stage of the fungus on infected rice plants has been observed for the first time in India.

PATHOGENICITY OF PHYTOPHTHORA PARASITICA ISOLATED FROM REGAL WHITE CLOVER ROOTS. Plant Dis. Rep. 53(6):446-450. June 1969. 1.9 P69P
A species of *Phytophthora* was isolated from discolored roots of "Regal" white clover (*Trifolium repens*). The fungus did not form sexual organs in culture but was identified from the shape and size of its sporangia and chlamydospores, its temperature relations, and its pathogenicity as *P. parasitica*. "D55-1492", "D60-9647", "Arksoy", and "Lee" soybean (Glycine max); "Alaska" garden pea (*Pisum sativum*); blue lupine (*Lupinus angustifolius*); yellow lupine (*L. luteus*); and "Marglobe" tomato (*Lycopersicon esculentum*) proved susceptible in varying degree when seedlings were inoculated. The fungus caused damping-off of seedlings of Arksoy soybean and "Delta" alfalfa (*Medicago sativa*) when seeds were planted in infested soil or sand. The fungus caused a rot of green tomatoes, mature apples, Irish potato tubers, and immature cotton bolls when these were inoculated.

EFFECT OF ROTATION WITH CORN ON CURCUBIT SCAB. Plant Dis. Rep. 53(6):452-453. June 1969. 1.9 P69P
Experimental plots at Georgetown, Delaware were located on land that had been in continuous cucurbit production for several years and that was heavily infested with *Cladosporium cucumerinum* Ell. and Arth., the soilborne fungus that causes scab. In 1965 four of the 16 test plots, in a randomized block design, were designated as continuous cucurbit areas and were seeded with both cantaloup and cucumber and 12 plots were seeded with corn. In 1966 and 1967, four plots remained in corn and eight alternated with cucurbits. In plots maintained in corn during 1965 to 1967 and planted to cucurbits in 1968, there was no significant difference in the total fruit produced or in incidence of scab. The significant finding was that the scab fungus survived the 3-year period in the absence of cucurbits and was as serious a disease problem in the rotation plots as in those in continuous cucurbits for the 4-year period.

ATYPICAL SEPTORIA NODORUM ASSOCIATED WITH A "VARIEGATION" DISEASE OF WHEAT. Plant Dis. Rep. 53(6):455-458. June 1969. 1.9 P69P
We isolated an atypical strain of *Septoria nodorum* from wheat leaves having symptoms similar to those caused by wheat streak mosaic virus, but from which no virus could be transmitted. In culture and in symptoms induced on inoculated wheat, the fungus was different from typical *S. nodorum*. Wheat grown in the greenhouse and inoculated with atypical *S. nodorum* developed yellow-green to yellow blotches, flecks, and small spindle lesions. We believe the atypical *S. nodorum* is involved in the syndrome of the "variegation" disease as it occurred in Pennsylvania and Ohio in 1968, although it is probably not the sole incident.

THE EFFECT OF MODE IRRIGATION AND WIND DIRECTION ON DISEASE SEVERITY CAUSED BY XANTHOMONAS VESICATORIA ON TOMATO IN ISRAEL. Plant Dis. Rep. 53(6):459-461. June 1969. 1.9 P69P
Development of bacterial spot disease caused by *Xanthomonas vesicatoria* in inoculated tomatoes was associated with the mode of irrigation and wind direction in the plot. An increased spread and a higher disease incidence were found under overhead sprinkling than under furrow-irrigation. The most rapid spread of infection was on the eastern side of the centers of inoculation in the sprinkled plot, while no consistent patterns of its direction were observed in the furrow-irrigation plot. It was assumed that the spread of the disease eastward in the sprinkled plot was due to the prevailing wind direction during irrigation, which carried droplets of water with inoculum from the west to the east.

FUNGICIDES TESTED AGAINST POWDERY MILDEW IN ARIZONA CANTALOUPE FIELDS. Plant Dis. Rep. 53(6):467-470. June 1969. 1.9 P69P
An evaluation of some fungicides for the control of cantaloupe powdery mildew (*Erysiphe cichoracearum*) in Arizona commercial cantaloupe field is reported. Data from two successive seasons of testing confirm 6-methyl-2,3-quinoxalinedithiol cyclic carbonate (Mor.) to be highly effective in a preventative spray program. Some observations are made regarding Mor. and other chemicals in an eradicant program. In 1968, at the rates applied weekly in a preventative spray schedule, benomyl (D-1991) and parinol (EL-241) were as highly effective as Mor.

BLIGHT OF BROAD BEAN, A NEW PYTHIUM DISEASE. Plant Dis. Rep. 53(6):470-472. June 1969. 1.9 P69P
A serious blight of broad bean was observed in New Delhi, India in February 1968. Disease incidence varied from 40 per cent to 60 per cent. Plants at all stages of growth were affected. A *Pythium* sp., identified as *Pythium graminicola* Subramaniam, was consistently isolated from infected tissues and was found to be the cause of the disease. Of several inoculation methods tested, best results were obtained when the inoculum was placed at all the leaf axils and the plants incubated at 25°C for 30 hours at high humidity.

EFFECTIVENESS OF PREINOCULATION AND POSTINOCULATION TREATMENTS WITH SODIUM ORTHOPHENYLPHENATE, THIABENDAZOLE, AND BENOMYL FOR GREEN MOLD CONTROL IN ARTIFICIALLY INOCULATED EUREKA LEMONS. Plant Dis. Rep. 53(6):479-482. June 1969. 1.9 P69P
Storage disease caused by *Penicillium digitatum*; Fungicide 1991.
Sodium orthophenylphenate (SOPP) 2.0 per cent, 2-(4'-thiazolyl) benzimidazole (TBZ) 0.2 per cent, and benomyl 0.2 per cent were highly effective for control of green mold of artificially inoculated "Eureka" lemons, despite an incidence of 65-99 per cent decay in inoculated controls. When used as postinoculation treatments, decay reduction amounted to 98-100 percent. When applied before inoculation and, in particular, when followed by a rinse, SOPP reduced decay by less than 50 per cent, while TBZ, and benomyl even more so, gave a 95-100 per cent reduction in two of three experiments. Contrary to SOPP, which has a very low protective activity, benomyl and TBZ both protect the fruit against a subsequent inoculation, which presents a possibility for a single, double-purpose treatment.

AIR POLLUTION STUDIES ON PLATANUS AND AMERICAN ELM [ULMUS AMERICANA] SEEDLINGS. Plant Dis. Rep. 53(6):482-484. June 1969. 1.9 P69P
Growth in height of various species and seedlots of *Platanus* in ambient greenhouse air averaged only 75 per cent of that in a carbon-filtered atmosphere. Variation in growth response among and within seedlots indicated that selection for pollution-tolerant individuals is feasible. Variation in susceptibility to leaf injury was exhibited by plants fumigated with ozone and sulfur dioxide. American elm seedlings were more tolerant of both fumigants than *Platanus*, and differences in tolerance among progenies were apparent.

EFFECT OF TWO SYSTEMIC INSECTICIDES ON INCIDENCE OF HELMINTHOSPORIUM ORYZAE ON RICE. Plant Dis. Rep. 53(6):486-487. June 1969. 1.9 P69P
Diazinon and phorate.
The use of systemic soil insecticides for control of insects has been reported by various workers. Their observations show that systemic insecticides applied in the soil have an effect on the aerial parts of the plant. Recently, Jaiswal and Rishi (2) reported an increased concentration of nitrogen, phosphorus, and potash in sugarcane plants grown in fumigated soil over those grown in unfumigated soil. The chemical may have been absorbed and translocated systemically, to alter the host metabolism and thereby affect the host-parasite relationship. We know of no reference, however, to such an observation. Based on such an assumption, a preliminary field observation was made in an experimental rice plot to which two systemic insecticides were applied. The results are reported here.

MECHANICALLY TRANSMISSIBLE MYCOPLASMA FROM NATURALLY INFECTED PEAS. Plant Dis. Rep. 53(7):499-503. Ref. July 1969. 1.9 P69P
A size-variable (15 to 250 nm), pleomorphic agent (618M) concluded to be a mycoplasma was found associated with alfalfa mosaic virus (AMV), was mechanically transmissible, was isolated from infected pea tissues and purified, and was found to grow in a serum-rich liquid medium. Purified mycoplasma was re-established in pea plants, induced faint chlorotic mottle, and was again re-isolated. However, purified AMV combined with 618M was required to reproduce the originally observed disease. Serological tests indicated a close antigenic relationship between 618M and *Mycoplasma meleagridis* and *M. gallisepticum* (avian) and *M. salivarium* (human).

EVIDENCE OF GENETICALLY CONTROLLED VARIATION IN SYMPTOM EXPRESSION OF POTATO VIRUS Y INFECTION IN *CAPSIUM ANNUUM* "ITALIAN EL." Plant Dis. Rep. 53(7):504-506. July 1969. 1.9 P69P
Seedlings derived from selfed potato virus Y indexed susceptible and resistant "Italian EL" pepper plants exhibited four types of symptom expressions. Severe symptoms appeared only in seedlings derived from indexed-susceptible clones. Further selfing has resulted in stabilization of the symptom expressions. It is concluded that symptom expression is genetically controlled in Italian EL pepper.

VARIETAL RESPONSES OF PETUNIA TO SEVERAL AIR POLLUTANTS. Plant Dis. Rep. 53(7):506-510. July 1969. 1.9 P69P
F. L. Fox, W. H. Heck, and F. J. Campbell, joint authors.
Fifteen varieties of petunia were tested for their reaction to ozone, sulfur dioxide, peroxyacetyl nitrate, nitrogen dioxide, and irradiated auto exhaust in special test chambers. Results indicate that varieties resistant to one pollutant are often resistant to the others. White Cascade was found to be the most sensitive variety in an overall comparison of all varieties tested. Red Magic is also quite sensitive to the four individual gases. Both red and white varieties appear to be sensitive to a number of pollutants.

EXPERIENCE WITH VIRUSES IN REGISTERED PRUNUS SEED AND SCION TREES IN WASHINGTON. Plant Dis. Rep. 53(7):510-513. July 1969. 1.9 P69P
In two Yakima Valley, Washington seed and scion blocks of registered Prunus trees (apricot, sweet and sour cherry, myrobalan, nectarine, peach, plum, and prune), planted in behalf of a fruit tree nursery certification program, the incidence of NRSV was recorded over a 9-year period, 1960-1968. In a total of 1101 trees, NRSV was found only in mazzard and mahaleb seed trees (69 in a total of 629) as determined by indexing on Shirougen and Krassa Severa. No GRM was detected by tests on Kwanzan. NRSV was not detected on mazzard until the fourth and fifth years and on mahaleb until the sixth and ninth years, which may indicate pollen transmission.
A program of intensive indexing, prompt removal of infected trees, and replanting makes it possible to continue seed production of a probable virus content of less than 1 percent even though it may not be possible to eliminate the virus completely once it appears in a block.
- 71737 Phelps, W. R., and Weber, R.
AN EVALUATION OF CHEMOTHERAPEUTANTS FOR CONTROL OF BLISTER RUST CANKERS; EASTERN WHITE PINE [*Pinus strobus*]. Plant Dis. Rep. 53(7):514-517. July 1969. 1.9 P69P
Cronartium ribicola.
Growth-regulating compounds, organic chemicals, and conventional fungicides, when applied as a basal-stem treatment to scarified and nonscarified cankers, were not effective in suppressing or eliminating blister rust cankers in eastern white pine.
None of the materials tested was better than cycloheximide; however, several did reduce canker growth and activity. These included triphenyltin acetate, bibiphenyl, pentachlorophenol, *o*-tolyl acetate, cycloheximide, and the growth regulators butyl ester 2,4,5-trichlorophenoxyacetic acid and the butyl ester 2,4-dichlorophenoxyacetic acid.

RESULTS OF A PREPLANT FUMIGATION TRIAL FOR THE CONTROL OF LONGICORUS AFRICANUS ON LETTUCE. Plant Dis. Rep. 53(7):519-523. July 1969. 1.9 P69P
J. W. Osgood, K. S. Mayberry, A. O. Paulus, H. W. Otto, and F. Shibuya, joint authors.
The results of a preplant soil fumigation trial with 1,3-dichloropropene brought about an earlier lettuce crop maturity and a significant reduction in taproot damage. Yield differences between the fumigated and non-fumigated plots in this trial were not significant; however, in a normal growing season it is believed that the differences would have been highly significant in favor of the fumigation treatment. The reasons for the recent discovery of this pathogen are believed to be primarily due to: 1) The lack of surveys for nematode pathogens of head lettuce; 2) a shortened fallow period between lettuce and the previous crop; and 3) precision planting of the lettuce.

NEMATOCIDES FOR CONTROL OF PLANT-PARASITIC NEMATODES ON SUGARCANE IN LOUISIANA. Plant Dis. Rep. 53(7):530-533. Ref. July 1969. 1.9 P69P
Effective control of parasitic nematodes with recently discovered nematocides has resulted in increased sugarcane yields. During the past three seasons the following granular materials controlled nematodes best and obtained highest yields in tonnage and sugar per acre: 2-methyl-2-(methylthio)-propionaldehyde O-(methylcarbamoyl)-oxime; O,O-diethyl O-((p-methylsulfonyl) phenyl) phosphorothioate; and O-ethyl S,S-dipropyl phosphorothioate. None of these materials significantly reduced sugar per ton. All helped to control nematodes, and were effective at low rates and easy to apply. The best of the halogenated hydrocarbons used was 1,2-dibromo-3-chloropropane.

MATURATION AND DISCHARGE OF ASCOPORES OF *VENTURIA INAEQUALIS*. Plant Dis. Rep. 53(7):534-537. July 1969. 1.9 P69P
In 1968, the mature apple scab primary spores (ascospores) were released from perithecia in overwintered leaves at Geneva, New York over a period ranging from about mid-April to the first week in July. The start of spore release coincided with the early tight cluster stage of apple fruit bud development. This was a late start compared with most years when some mature spores are released as early as the silver and green tip stage. The peak of ascospore discharge occurred at the petal fall stage in mid-May. The procedures used for differential counts on ascospore maturity and for counts on ascospore discharge from overwintered leaves are described.

EFFECT OF TOBACCO MOSAIC VIRUS ON PEPPER YIELD. Plant Dis. Rep. 53(7):541-543. July 1969. 1.9 P69P
O. Gracia, R. E. Pontis, and J. Boninsegna, joint authors.
This work was done to appraise the loss caused by tobacco mosaic virus in the pepper crops of Mendoza, Argentina.
Both early and late inoculations in the field gave an economic loss in total yield of California Wonder and Perfection varieties. Yolo Wonder, a resistant variety, was unaffected by the mosaic inoculations.
Several measures were taken to reduce the contaminations in the check plots.
This paper confirms the practical utility of the preventive measures or the use of resistant varieties.

PLANT INJURY BY OXIDANT-TYPE POLLUTANTS IN THE NEW YORK CITY ATMOSPHERE. Plant Dis. Rep. 53(7):544-548. Ref. July 1969. 1.9 P69P
Snowstorm petunia, W3 tobacco, eastern white pine, common and hybrid lilacs, and oxidant-sensitive rubber strips were exposed to the Brooklyn atmosphere in unfiltered and carbon-filtered growth chambers. The cracked rubber strips and oxidant-type symptoms on the plants, including adaxial and bifacial flecks and abaxial glaze and discoloration, demonstrated the presence of oxidants and phytotoxic concentrations. The W3 tobacco and eastern white pine were injured the most severely. Symptoms resembling those caused by ozone on plants in the unfiltered chambers, and the inducement of identical symptoms by experimental fumigation with ozone, implicated this gas as one of the phytotoxins.

DUTCH ELM DISEASE: RELATION OF SPREAD AND INTENSIFICATION TO CONTROL BY SANITATION IN SYRACUSE, NEW YORK. Plant Dis. Rep. 53(7):551-555. July 1969. 1.9 P69P
Ceratocystis ulmi.
The influence of sanitation in limiting Dutch elm disease progress was evaluated from observations made on the history and development of the disease in Syracuse, New York over a 20-year period. A case study was made by utilizing data of local, State, and Federal agencies on a control program based primarily on sanitation. Surveys showed disease incidence and results of city sanitation programs during the past 17 years, estimated extent of root-graft transmission within a 4-year period, and numbers of elms remaining after maximum sanitation efforts were discontinued. The efficacy of proper sanitation and the complications of periodic adverse environmental factors were evaluated.

EFFECT OF PRATYLENCHUS VULNUS ON THE GROWTH OF "ASCOLANO" AND "MANZANILLO" OLIVE TREES IN A GLASSHOUSE. Plant Dis. Rep. 53(7):557-558. July 1969. 1.9 P69P
The root-lesion nematode (*Pratylenchus vulnus* Allen & Jensen) frequently occurs in roots and in the rhizosphere of olives in California (1,2,6). Cortical lesions on olive roots, typical of those caused by *P. vulnus*, were described by Condit and Horne (1) and Day and Serr (2). Condit and Horne (1) considered *P. muscicola* to be the causal nematode, which Sher and Allen (7) later identified as *P. vulnus*. Lownsbury and Serr (6) considered the "Verdalian" olive to be a relatively poor host for *P. vulnus*. Some effects of *P. vulnus* on the growth of small "Ascolano" and "Manzanillo" olive trees and their host qualities are presented and discussed.

BARLEY YELLOW DWARF VIRUS IN THE TEXAS PANHANDLE. Plant Dis. Rep. 53(7):564-565. July 1969. 1.9 P69P
Barley yellow dwarf virus was first noticed in the Texas Panhandle in 1967. In 1968 the virus was successfully transmitted, with the greenbug, *Schizaphis graminum* (Rond.), from field-collected infected leaf material.
- 71756 Frederiksen, R. A., and Bockholt, A. J.
SCLEROSPORA SORGHII, A PATHOGEN OF CORN IN TEXAS. Plant Dis. Rep. 53(7):566-569, map. Ref. July 1969. 1.9 P69P
During the past 4 years downy mildew has become an increasingly severe, significant problem of corn in south and central Texas. Distribution of the disease, a brief description of symptoms in corn, and the reaction of selected corn hybrids and inbred lines are presented.

VERTICILLIUM CONTROL IN GERBERA. Plant Dis. Rep. 53(7):570-572. Ref. July 1969. 1.9 P69P
Verticillium dahliae caused heavy losses in commercial gerbera plantations in Israel by severe stunting and wilting of plants, rather than immediate death. Fumigation with methyl bromide, chloropicrin and mixtures (70:30) of the two gave good control of the disease. Best results were obtained with a mixture at 700 kg/ha and with methyl bromide at 1000 kg/ha.
- 71759 Niedbalski, J. F., and Rickard, S. F.
SCLEROTINIA [SCLEROTIUM] WHITE MOLD CONTROL IN SNAP AND LIMA BEANS WITH 2,6-DICHLORO-4-NITROANILINE. Plant Dis. Rep. 53(7):573-575. July 1969. 1.9 P69P
Sclerotinia white mold of snap and lima beans was controlled in trials in western New York with applications of 2,6-dichloro-4-nitroaniline. Multiple spray applications provided the best disease control in snap beans when the initial spray was applied at first blossom and subsequent applications timed according to environmental conditions affecting the disease.

SOUR ROT DISEASE OF PEACHES ON THE
MARKET. Plant Dis. Rep. 53(7):580-582. July 1969.
1.9 P69P

In 1967 and 1968 peaches from the southeast-
ern and eastern United States were studied to determine
the causes of wholesale and retail waste. As high as
7 1/2 percent of the waste resulted from bruising and
mechanical injuries. Isolating and re inoculation studies
showed that many of the bruised and injured areas were
rotted by Geotrichum candidum Lk. ex Pers. Also many
peaches with split pits had been invaded by the same
organism. Tests indicated that peaches could be con-
taminated during handling operations and not decay until
almost ripe.

Apparently bruised peaches contaminated with
Geotrichum had a shelf life of from one to several days
less than peaches similarly bruised but free of contami-
nation.

TWO IMPROVED METHODS FOR SELECTIVE-
LY ISOLATING FUSARIUM OXYSPORUM FROM SOIL
AND PLANT ROOTS. Plant Dis. Rep. 53(7):589-591.
July 1969. 1.9 P69P

Soybeans.

Potato-dextrose agar at pH 4.0-4.2 supple-
mented with 500 ppm of the surfactant TMN was found to
be a useful culture medium for the selective isolation of
Fusarium oxysporum Schlecht. from soil, rhizosphere
and root surfaces. The medium proved to be superior to
four other media including the previously described pep-
tone-rose bengal agar, PCNB-peptone agar, galactose-K
K₂S₂O₅ agar and NPX surfactant-amended PDA.

A modified shaker method for root washing was
compared with conventional running water methods. The
shaker method was superior in allowing more recovery of
the pathogen and greatly reducing the amount of contami-
nating or superficial fungi associated with roots.

LATIN AMERICAN LIGHT-TOBACCO EXPORTS GROW. Foreign Agr. 7(33):7-8, 16. Aug. 18, 1969. A281.9 F76Fo
Lighter kinds of tobacco—particularly the flue-cured types and burley—make up the bulk of U. S. exports of tobacco. Four Latin American countries that have been increasing their production of these lighter types of tobacco were visited by the author early this year.

SEED PRODUCTION IN SOUTHERN APPALACHIAN OAK STANDS. U. S. Forest Serv. Res. Note SE-91.7 p. Sept. 1968. A99.9 F7623Un
Acorn production in mixed oak stands of different densities varied considerably among stands, years, and species. Density had no effect on total acorn production. Although numerous acorns were initiated each year, the majority either failed to develop fully or were damaged by insects and animals.
- 71800 Godshall, W. D., and Davis, J. H.
ACOUSTICAL ABSORPTION PROPERTIES OF WOOD-BASE PANEL MATERIALS. U. S. Forest Serv. Res. Paper FPL-104.8 p. May 1969. A99.9 F7634U
Wood and wood-base materials frequently are used as interior finish in buildings where sound absorption (reduction of the level of sound generated in a room, within that room) needs to be estimated to compare the effectiveness of different materials. Various wood-base materials were evaluated for acoustical absorption using the ASTM standard impedance tube method to determine effects of humidity in air and moisture content of materials on sound absorption. At relative humidities between 30 and 80 percent at room temperatures and at moisture contents in the wood-base materials produced by those conditions absorption was unaffected. Values of acoustical absorption for 15 typical materials are presented.

EFFECT OF TENSION WOOD ON HARD
MAPLE [ACER SACCHARUM] USED FOR MANUFAC-
TURED PARTS. U. S. Forest Serv. Res. Paper FPL-108,
8 p. May 1969. A99.9 F7634U

The effects of tension wood, evidenced by longi-
tudinal warping and shrinking and machining defects, are
reported for hard maple lumber. The rejection of fine
furniture cuttings, door stiles, rails, and frames from
seasoned lumber with appreciable amounts of readily
visible tension wood emphasizes the need for this kind of
information. If the presence of tension wood in timber is
recognized before the timber is processed, the wood can
be diverted to an end use in which the effects of tension
wood will be acceptable.

Seventeen trees provided a range in amount of
lean and rate of growth. From several locations within
the but log, long slender cuttings were evaluated, both at
13 and 7 percent equilibrium moisture content.

CONTROL OF PULP CHIP DETERIORATION
WITH KRAFT GREEN LIQUOR. U. S. Forest Serv. Res.
Paper FPL-110, 4 p. May 1969. A99.9 F7634U

W. E. Eslyn, L. L. Zoch, and G. J. Hajny, joint
authors.

A laboratory-prepared green liquor applied to
fresh pulp chips by a dip treatment effectively prevented
loss in wood substance from fungal action and prevented
temperature rise in simulators of chip piles. These re-
sults suggest that green liquor at the concentrations used
acts as a fungicide and an enzyme inhibitor. Long-term
tests under field conditions are planned to confirm these
results.

SUNFLOWER: A LITERATURE SURVEY, JANUARY 1960-JUNE 1967. U. S. Natl. Agr. Libr. Libr. List 95,133 p. June 1969. 1.916 L612

This bibliography includes references to material on various aspects of sunflower (*Helianthus annuus*) cultivation and utilization both in the United States and abroad. It contains listings of books and articles on the growth and uses of the sunflower and on the production of sunflower oil and its by-products.

Since this was intended to be a general survey of the available literature, no attempt has been made at selectivity.

STATE AGRICULTURAL EXTENSION SERVICE
PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Maryland, 20705.

Papers by G. J. Cuthbush, K. G. Newton, R. L.
Sykes, and G. H. Forward.

73287 Ivanova, N. M., and Rogov, I. A. TEMPER-
ATURE CHARACTERISTICS OF ACTIVE CON-
DUCTIVITY OF MEAT AND SOME MEAT PRODUCTS.
(Rus) Izv. Vyssh. Ucheb. Zaved. Pishch. Tekhnol. 1:
152-155. 1968. 389.8 I28

73288 Little, C. H., and Doeksen, G. A. MEASURE-
MENT OF LEAKAGE BY THE USE OF AN
INPUT-OUTPUT MODEL. Amer. J. Agr. Econ. 50(4):
921-934. Ref. Nov.1968. 280.8 J822
Application to livestock and livestock products
flow in Oklahoma.

73289 Tonsbeek, C. H. T., and others. COMPO-
NENTS CONTRIBUTING TO BEEF FLAVOR.
NATURAL PRECURSORS OF 4-HYDROXY-5-METHYL-3
(2H)-FURANONE IN BEEF BROTH. J. Agr. Food Chem.
17(2):397-400. Ref. Mar./Apr.1969. 381 J8223
E. B. Koenders, A. S. M. van der Zijden,
and J. A. Losekoot, joint authors.

73290 VERTICAL INTEGRATION IN THE BEEF
BUSINESS. Western Meat Indus. 15(5):11-13.
May 1969. 50.8 W52

73291 Werner, K. INTER-FARMER COOPERATIVE
RAISING OF HEIFERS FOR SHORT-TERM
STOCKING OF LARGE DAIRY UNITS. (Ge) Tierzucht
23(2):80-82. Feb.1969. 49 T443

73292 Wilde, M. EFFECTS OF THE HORIZONTAL
AND VERTICAL COOPERATION ON THE RE-
PRODUCTIVE PROCESS. (Ge) Tierzucht 23(2):60-63.
Feb.1969. 49 T443
Swine.

Analysis and Composition

73293 Alford, J. A., and Palumbo, S. A. INTER-
ACTION OF SALT, pH, AND TEMPERATURE
ON THE GROWTH AND SURVIVAL OF SALMONELLAE
IN GROUND PORK. Appl. Microbiol. 17(4):528-532.
Ref. Apr.1969. 448.3 Ap5

73294 Borchert, L. L., Powrie, W. D., and
Briskley, E. J. A STUDY OF THE SARCO-
PLASMIC PROTEINS OF PORCINE MUSCLE BY STARCH
GEL ELECTROPHORESIS. J. Food Sci. 34(2):149-153.
Ref. Mar./Apr.1969. 389.8 F7322

73295 Brandes, H. EVALUATION OF NON-SPECIFIC
BACTERIAL CONTENT IN A BACTERIOLOGI-
CAL MEAT INSPECTION. (Ge) Arch. Lebensmittelh. 20
(1):9-10. Jan.1969. 41.8 L49

73296 Bratzler, L. J., and others. SMOKE FLA-
VOR AS RELATED TO PHENOL, CARBONYL
AND ACID CONTENT OF BOLOGNA. J. Food Sci. 34
(2):146-148. Ref. Mar./Apr.1969. 389.8 F7322
M. E. Spooner, J. B. Weatherspoon, and
J. A. Maxey, joint authors.

73297 Davey, C. L., and Gilbert, K. V. STUDIES IN
MEAT TENDERNESS. 7. CHANGES IN THE
FINE STRUCTURE OF MEAT DURING AGING. J. Food
Sci. 34(1):69-74. Ref. Jan./Feb.1969. 389.8 F7322

73298 Dryden, F. D., Marchello, J. A., and Ray,
D. E. RELATIONSHIP OF CERTAIN CHEMI-
CAL CONSTITUENTS OF BEEF MUSCLE TO ITS EAT-
ING QUALITY. J. Food Sci. 34(1):57-61. Ref. Jan./Feb.
1969. 389.8 F7322

73299 Fernandez, E., Tang, T., and Grecz, N. TOX-
ICITY OF SPORES OF CLOSTRIDIUM BOTU-
LINUM STRAIN 33A IN IRRADIATED GROUND BEEF.
J. Gen. Microbiol. 56(1):15-21. Ref. Apr.1969.
448.3 J823

In canned beef.

73300 Genigeorgis, C., Riemann, H., and Sadler,
W. W. PRODUCTION OF ENTEROTOXIN-B
IN CURED MEATS. J. Food Sci. 34(1):62-68. Ref.
Jan./Feb.1969. 389.8 F7322

73301 Gorbатов, A. V., and Kosol, V. D. CON-
CERNING THE SHIFT PROPERTIES OF COM-
MINUTED MEAT AT DIFFERENT MOISTURE AND TEM-
PERATURE. (Rus) Izv. Vyssh. Ucheb. Zaved. Pishch.
Tekhnol. 3:149-151. 1968. 389.8 I28

73302 Greaser, M. L., and others. POST-MORTEM
CHANGES IN SUBCELLULAR FRACTIONS
FROM NORMAL AND PALE, SOFT, EXUDATIVE POR-
CINE MUSCLE. I. CALCIUM ACCUMULATION AND
ADENOSINE TRIPHOSPHATASE ACTIVITIES. J. Food
Sci. 34(2):120-124. Ref. Mar./Apr.1969. 389.8 F7322
R. G. Cassens, E. J. Briskley, and W. G.
Hoekstra, joint authors.

ANNOUNCEMENT

The subject index to this issue of the Bibliography of Agriculture was prepared by permuting the subject entries originally assigned to each citation.

The purpose of permuting the entries was to obtain additional points of access to the information and to increase the specificity of information under each entry.

Following is a partial listing of terms formerly used as subheadings under names of individual plants, insects and agricultural products, which may now be looked up directly. These terms will be followed by the names of the plants, insects or agricultural products in question:

analysis	irrigation
associations (i.e. organizations)	morphology
behavior	outlook
biochemistry	packing
breeds	parasites
chemistry	physiology
composition	planting
conferences	processing
costs	products (i.e. by-products)
cytology	propagation
determination	properties
directories	pruning
diseases	purchasing
drying	taxonomy
ecology	teaching
embryos	thinning
genetics	varieties
grading	yields
harvesting	

NATIONAL AGRICULTURAL LIBRARY
U.S. DEPARTMENT OF AGRICULTURE

BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

December 1969

No. 12

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

USDA Publications

State Agricultural Experiment Station Publications

State Agricultural Extension Service Publications

Agricultural Economics and Rural Sociology

Agricultural Products

Animal Industry

Engineering

Entomology

Food and Human Nutrition

Forestry

Plant Science

Soils and Fertilizers

Miscellaneous

The classified section is followed by the listing of:

New Periodicals and Serials

Translations

Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765--List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational Index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md., 20705.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md. 20705. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U.S.D.A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).
